

# A WORLD FIRST

MULTIVARIO 2082

MULTIVARIO · 2082

Simply the Best in Parking

1

The MULTIVARIO integrates 5 parking systems into one unit, meaning that instead of worrying about 5 variants, one MULTIVARIO does it all. All the benefits of previous versions such as economy of space and parking comfort feature once again in the Multivario.

2

With the MULTIVARIO you can select the pit and height dimensions easily and flexibly. The optimum installation begins with a pit depth of 175 cm and a height of 325 cm. No more fixed grid sizes. Every available cm is utilized for the vehicle and your comfort.

3

And if there are not enough height and pit depth available - a reduction of the platform incline by already 1 degree will reduce the space requirement by approximately 5 cm – without reducing the actual parking space!

4

Also heavy vehicles can be parked on the Multivario. A surface load per parking space of **up to 3.000 kg** is possible!

5

The MULTIVARIO comes with the suitable design software ProDesigner, which you can access online at [www.multiparking.com](http://www.multiparking.com).

6

And...the MULTIVARIO can also be adapted for different vehicle dimensions in the future. Your requirements change, and the vehicle changes; today a sporty two-seater, tomorrow a family carriage, and maybe the day after a 4x4 for off-road comfort. The Multivario satisfies all of these demands.

# If you can surf the net you're already halfway to planning your parking system.

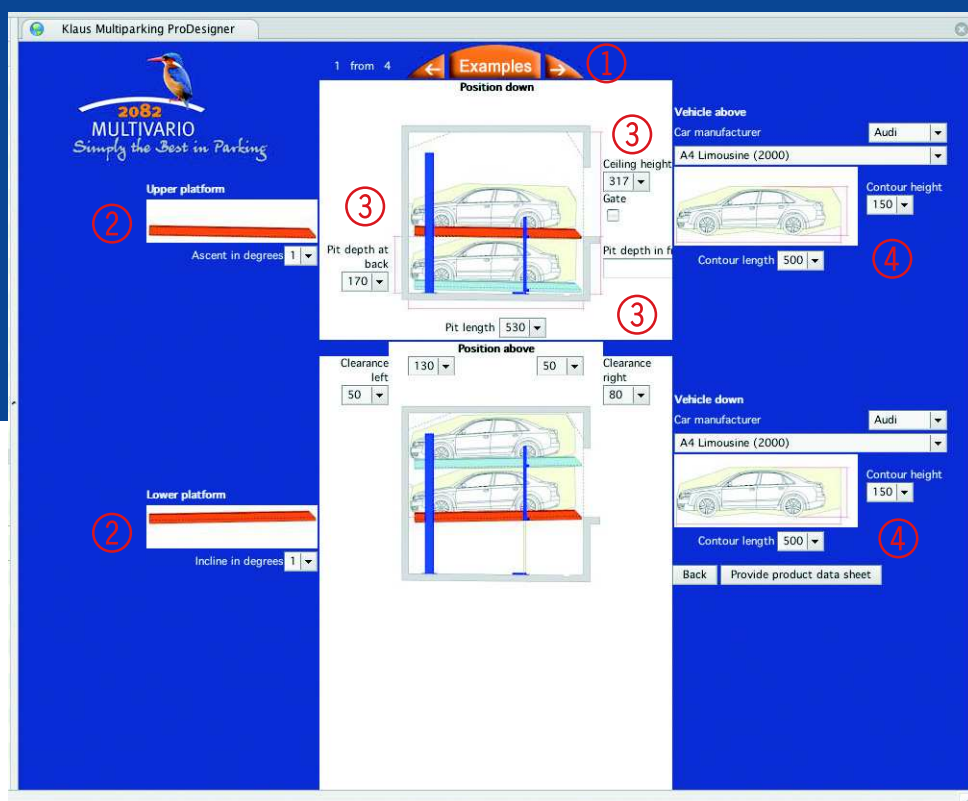

**NEW!**

[Individual planning for the perfect parking system]

Only Klaus Multiparking offers the online access to the ProDesigner software for individually designing your system. ProDesigner can be used without specific knowledge of data processing or CAD. You can easily use it to individually create and design your Multivario according to your needs.

ProDesigner will help the customer find his perfect parking system, and the customer himself can actively assist in designing it.

- ① Select **Examples** to choose from various design samples
- ② Select: **Ascent/descent of the platform** (top and bottom)
- ③ Select: **Ceiling height / pit depth / pit length**
- ④ Select: **Vehicle dimensions** (top and bottom)

- ▶ Your Multivario is assembled automatically.
- ▶ Impossible settings are marked in red, and a legend is displayed. Then change the marked settings, or select another design sample.
- ▶ Press the "Create product data sheet" button to prepare your detailed data sheet for printing.
